

PREMIER MANUFACTURING CO.

www.premier-mfg.com

It's NOT a one-size-fits-all industry.

YOU want more options.

WE are listening and responding.

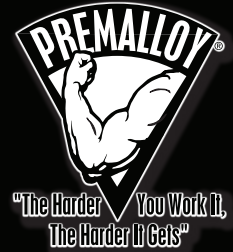

**THE BEST IN QUALITY & SERVICE,
WE'RE PULLING FOR YOUR SUCCESS.**

So, what's the best option for you?

"The Harder You Work It, The Harder It Gets"

"Premalloy" - Premier's Exclusive Alloy

Premalloy actually work-hardens at the contact-surface during normal use. This results in longer service life. Premalloy is our exclusive alloy and is highly recommended for off-road and aggregate-type applications, due to its wear-resistant characteristics. For quality performance, you can find various coupling models made from this exclusive material.

"Raising The Bar In Strength & Value"

"Saf-Tite" - Strength and Value

Look to Saf-Tite when looking for a maximum strength coupling at a value. Saf-Tite couplings are unsurpassed in Maximum Gross Trailer Weight capacities. They also have easy to operate latch systems, with polymer pivot points. The difference is evident when you compare the capacities of these against competing models. And these quality couplings are available to you at a value - compare the difference.

"Your Ally In The War Against Corrosion"

"EL" - Extended Life

Our 2000 Series Couplings now have an "Extended Life" latch option. To fight the war on corrosion, we engineered latch lubrication ports that deliver lubricant directly to the pivot points of our latch system. This direct-inject system provides for a rapid delivery of lubricant - right where it counts. The result is smooth, consistent latch performance over an extended period of time.
